

**Amendments to the Claims**

This listing of claims will replace all prior versions, and listings, of claims in the application. Please amend Claim 6 as indicated in the Listing of Claims. Please cancel Claim 7 without prejudice.

**Listing of Claims**

1-5. Cancelled.

6. (Currently Amended) A dry measuring test device, comprising a reagent layer comprising a reagent containing a chromogen and a matrix which retains said reagent in the form of a layer, for determining a substance to be measured in a liquid sample by measuring the degree of coloring of the chromogen generated through the reaction between the substance to be measured and the reagent in terms of reflectance of light entered into the reagent layer, wherein a light blocking layer containing light blocking particles in the form of polymer beads embedding the light blocking particles is laminated on the reagent layer, wherein the light blocking particles are carbon black.

7. Cancelled.

8. (Original) The dry measuring test device as claimed in Claim 6, wherein the light blocking particles are contained in an amount of 15 to 90 wt% based on the total weight of the light blocking layer.

9. Cancelled.

10. (Previously Amended) The dry measuring text device as claimed in Claim 8, wherein said polymer beads contain as a main component a compound selected from the group consisting of: polymer or copolymer having as a main component monomers selected from the

group consisting of acrylic acid, methacrylic acid, maleic acid, ester of these substances, styrene, and alkylstyrene; polyurethane; polyurea; polyethylene; polypropylene; and polyvinyl chloride.

4. (Previously Amended) The dry measuring test device as claimed in Claim 1, wherein the light blocking particles are contained in an amount of 10 to 70 w/v% based on the total content of the polymer beads, and the polymer beads are contained in the light blocking layer in an amount of 30 to 90 wt% based on the total weight of the light blocking layer.

5. (Previously Amended) The dry measuring test device as claimed in Claim 1, wherein an average particle diameter of the polymer beads ranges from 1 to 40  $\mu\text{m}$ .

6. (Previously Amended) The dry measuring test device as claimed in Claim 1, wherein the reagent layer further contains polymer beads embedding the light reflective particles.
